

Process & Decision Documentation

Side Quests and A4 (Individual Work)

The goal was to add a level and create obstacles. I added a level 3 and obstacles (red squares) by adding the number 4 into each maze level making sure to add more as each level went on. I made it so that when the circle came into contact with the square it took 'damage' and became a lighter shade of red until it was hit again and disappeared for the circle to reach its goal. I added an if statement that showed ==4 as the obstacle and ==5 and to show its state when damaged for the circle to move through.

GenAI Documentation

No GenAi was used
